

CAPABILITIES

SYSTEM/CLOUD INTEGRATION SERVICES

Microneering is a supplier for the Air Force starting with the original SPLS program and continuing in EPBL. Also major prime contractors use our services: Honeywell, Boeing, Lockheed.

System Design

Our experience of over 30 years of designing new systems leads to insights as to the history of systems and clear vision of the future.

Software Development

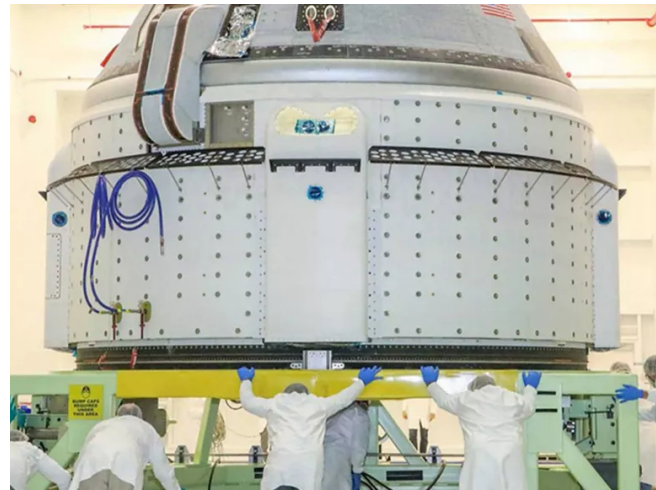

Microneering develops software in all major languages and platforms. Our invaluable knowledge and experience will save you from massive financial missteps, on time and budget deliveries, and lead to rock solid systems that last for decades.

Database Design/Implementation

Microneering's unique Black Box approach enables database invariance as seen from external clients. This means years of robust APIs to access your data without link rot or security flaws creeping into your systems.

COTS Cloud Solution Today

Microneering can put you online today. No need for you to develop in-house servers and resources. Go live right this instant.

“Removal of documentation libraries from the production floor is an added benefit along with immediate information access,” observes Banas. “Reduced product cycle times and improved documentation accuracy have resulted from the J-PLAN implementation.”
